

T-REX Multidirectional Lens System Vs Revolution Lens System

Features

The T-REX has got more integrated features:

1. Zoom
2. When panning, the image is always in the correct position, no electronic readjustment is necessary.
3. A big choice of front lenses is possible as most (still photography) lenses fit - Zeiss, Contax, Canon Leica, Nikon adapters are available.
4. The T-REX is not only a lens, it has become a system - new accessories like an underwater housing or a 90° periscope, or an anamorphic attachment.

Quality

The T-REX shows a higher quality than that of the Revolution, this makes it usable for movie films, the Revolution is only suitable for TV productions (due to the resolution not being good enough).

****** Please note that the T-REX does not accept Zeiss PL Mount prime lenses******
