

TECHNOVISION® *Classic*

P+S TECHNIK
Optics for Exceptional Images

The TECHNOVISION Classic lenses produce a genuine classic anamorphic look and bokeh due to the front anamorphic lens design. The lenses are low in contrast and warm in color and can be made to flare. The goal was a modern, full frame version of the vintage Technovision anamorphic lenses which have been used for hundreds of impressive widescreen feature films amongst those are "Apocalypse Now", "Leon the Professional" "Evita" "Out of Africa" and many more.

The lens is built in a compact, lightweight housing following the industries expectations for cine lenses concerning gear and marking.
