

PS-Finder Loupe for Sound Devices Pix-E

USING YOUR RECORDER / MONITOR ALSO AS A PROFESSIONAL VIEWFINDER

This viewfinder hood solution by P+S Technik offers the Director of Photography a brilliant eye-to-monitor-interface for your monitor/recorder to serve also as a professional viewfinder. The hood supports a brilliant and contrasty image in bright daylight. The integrated diopter (+/-1,5) allow optimal eyesight adjustment to display and help you to keep your eyes relaxed on long shooting days.

To attach the viewfinder hood, a bracket - the so called display frame - is mounted onto the monitor/recorder. The viewfinder hood is mounted plug & play into the quick release mechanism onto the display frame. Thanks to this smart mechanism the hood can be flipped open, closed, mounted or detached with tool-free and with one hand only. No modification of the monitor/recorder necessary. The PS-finder loupe can be used with either the right or the left eye and is compatible with standard eyepiece cups.

A range of accessories is available, e.g. a stable viewfinder holder which supports 3-point guiding when operating camera. It allows a maximum of comfort and adjustment for an ergonomic position of the viewfinder/recorder.

KEY FEATURES

- Sunshade for a better view
- +/-1,5 diopter eyesight adjustment for relaxed eyes
- An additional compensating lens can be incorporated in the eyepiece cup without rework
- No modification of the monitor needed
- Stable arm for 3-point guiding of camera movements
- High quality Made in Germany
